

# ACR-20 SAMPLE COLLECTION

The ACR-20 is a sequencer with a built-in sound module. It was released in 1995. It contains 235 sounds: 128 sounds in the general midi standard, 9 drum sets, and 98 extra sounds. Editing of the sounds in the ACR-20 is not possible. All sounds have built-in reverb added: in the ACR-20, reverb is either 'high' or 'low', deactivating is not possible. For the purpose of this sample collection, the reverb was set to the 'low' setting. From the Kontakt-interface, reverb can be added again, as well as chorus, flanger and phaser.

All sounds were recorded at 24-bit / 44 kHz sample rate, one sample per note, from C0 to C6 (six octaves). Sustained sounds were sampled four seconds per note and then looped. Most sound effects in the ACR-20 are not chromatic, but change every octave - these were sampled at F#0, F#1, et cetera.
