# INFORMATION

© 2017 by *nion*, all rights reserved. If needed, contact me through [info@nion.eu](mailto:info@nion.eu).

All samples have been recorded at 48,000 kHz/24-bit. In some instruments, some noise may be heard at the end of samples, due to the analogue recording and the base material from the U-20/220. This could not be avoided because the U-20/220 does not have a digital output. Noise reduction has not been applied, as it also alters the sound.

All usable notes have been sampled, from midi number 035 to 094. Empty samples have, of course, not been included.

Factory tones have the prefix number F---. Newly created tones (e.g., not available on the original expansion card) have the prefix U---.

As a bonus, the Standard Drums and Latin Percussion Sets have been added.

On the front panel of the Kontakt patch, you can control the amount of reverb, chorus, delay and flanger, effects that are also available in the U-220 hardware.

Of course, there are unlimited possibilities in Kontakt to create new sounds!

# TONE LIST

SN-U110-10		ROCK DRUMS
